CityView Virtual Inspections

Make a long-term investment in efficiency with CityView Virtual Inspections!

Save fuel, increase efficiency and reduce costs
CityView Virtual Inspections provides a secure, intuitive platform that allows municipal inspectors to conduct inspections remotely. Best of all, it's integrated with CityView Permits & Inspections.

Many CityView customers have already transitioned from paper to Electronic Plan Reviews and achieved tremendous efficiencies – both in their business processes and for contractors. They essentially eliminated the use of paper embraced a more efficient digital approach. Similarly, Virtual Inspections delivers significant savings to municipalities and contractors and is quickly becoming the new standard.

Municipalities are increasingly turning to video-based inspections to save time, improve inspector safety and increase productivity—without sacrificing quality.

However, many third-party video tools come with learning curves, security concerns and a lack of integration with permitting systems. That's why CityView is proud to offer Virtual Inspections, a purpose-built solution for local governments.

Benefits of remote inspections

Building departments that have implemented virtual inspections report that the benefits are long-lasting and impactful. Just a few of the advantages CityView Virtual Inspections provides include:

• **Save time and fuel** driving back and forth between job sites
• **Increase inspection capacity** without adding staff
• **Maintain a permanent record** of the virtual inspection directly within the permit, including screen shots and annotations

Isn't it time you make a long-term investment in efficiency? Learn more at www.municipalsoftware.com

Why adopt CityView Virtual Inspections?

Remote inspections offer immediate benefits, including:

• **Personal safety.** Conduct inspections without entering occupied or hazardous environments.

• **Technologically independent.** No third-party technology needed. CityView Virtual inspections uses straight peer-to-peer communications between the CityView server and the builder's mobile device.

• **Data security.** Unlike potentially insecure video conferencing technologies, the peer-to-peer communication does not transfer data through third-party cloud environments.

• **Cost savings.** Save on fuel and drive time by conducting inspections and re-inspections remotely. Conservative cost saving estimates range from $5-21 per inspection.
